LULI WOOD

ALWAYS STRIVE FOR THE FIRST

From this moment on get rid of the glitz and the pretentiousness and go back to the original idea of life in nature from now on.

With the most natural insistence, slowly enjoy the most natural home Luli wood industry new green building materials. Zero formaldehyde health products.

Committed to building the first brand of wood industry, I am the peak of the mountain! Self-cultivation, family harmony, loyalty to the essence of life!

As the leader of the wood industry, while constantly striving to broaden the horizon, we actively pay attention to the psychological demands of the end consumer groups.

Innovative product development ideas, and constantly introduce formaldehyde-free green product.

After years of hard work and accumulation, we have enough confidence, strength and execution.Let every friend join hands with Luli, go further!Let every friend join hands with Luli, go further!

LULI WOOD

HEALTHY LIFESTYLE CREATORS

Pursuing safety and health,
striving for the highest quality
with craftsmanship, and
creating high-quality products
has become a natural pursuit
and enjoyment of life.
Persistence in life
For more than 30 years, we have
never compromised
Only to take care of every home.

鲁丽板材形象大使 关晓彤

INTEGRITY
Keep one's promise,
Do everything with your heart.

ASSIDUOUS
Hard working, down-to-earth,
Never shy away from difficulties and persevere.

COOPERATION
We advocate communication at home and reciprocity abroad.
Create a harmonious and coordinated atmosphere.

INNOVATE
Continue to learn, continue to surpass,
Learn from others and meet challenges.

AIM
Create a fashionable life with green technology.

TACTICS
With high quality products and high-quality service.
Build a brand with strong vitality.

鲁丽木业
LULI WOOD

The first batch of national forestry key leading enterprises

Group adhering to the "green, low-carbon, innovative, coordinated" development concept, ecological wood industry and intelligent furniture manufacturing.

Industries such as import and export trade and modern logistics will play the main role, and various industries will complement each other's resources and utilize their driving forces.

A relatively complete circular economy industrial chain has been formed. At the same time, actively implement the branding strategy.

To upgrade the wisdom of traditional industries, leading the global wood industry new material manufacturing.

SHOUGUANG LULI
WOOD INDUSTRY CO., LTD.

COMPANY PROFILE

Shouguang Luli Wood Industry Co., Ltd. was founded in 2001, belongs to China's top 500 enterprises - Luli Group Co., LTD., is a furniture manufacturing and other development in the body of high-tech enterprises, national forestry key leading enterprises, national intellectual property advantage enterprises, Shandong Province manufacturing.Set R & D, production, sales of aldehyde-free veneer oriented structural board (OSB), integrated wood, wood flooring, fine board, technology wood, decorative board, fixed Industry individual champion enterprise, Shandong Green Factory, Shandong Intelligent Factory, Shandong Province heavy pollution.

The company is based in Shandong, the layout of the whole country, and strives to use 5-8 years to build 15 ecological industrial parks in the country, and achieve the output of 30 million m3 of directional structural panels, creating the world's first. Shandong Shouguang Industrial Park covers an area of 2million㎡, and has established the whole industrial chain layout from "one tree" to "one home". The park has an annual output of 300,000 / 600,000 m³ can be finished oriented structural board (OSB) production line, an annual output of 300,000 m³ log processing and drying production line, an annual output of 300,000 m3 finger joint board production line, an annual output of 2 million ㎡ wood flooring production line, an annual output of 180,000 cubic meters of decorative board production line, an annual output of 500,000 cubic meters of high-end decorative board production line, an annual output of 150000 sets of panel furniture production line.

At present, the company has passed the management system certification of quality, environment, occupational health and safety, energy, intellectual property, safety standardization, etc. It has obtained China Green products, children's safety products, China Environmental labeling products, FSC-COC International Chain of Custody, EU CE, US CARB, EPA, US no Aldehyde exemption NAF, Japan JAS, F☆☆☆☆ ☆ and other product certifications. The company has won many honors such as national intelligent manufacturing excellent scene, Shandong Province intelligent manufacturing pilot demonstration project, Shandong Province digital workshop, and China National plate brand.

The company takes promoting the green process of the industry as its own responsibility, with strong resource advantages, technological advantages, brand advantages and product advantages, based on the plate industry, gradually extend to the overall solution of home decoration, and is committed to creating a leading domestic comprehensive service operator for home decoration. The company has 4 scientific research platforms such as Shandong Enterprise Technology Center, established industry-university-research cooperation with Chinese Academy of Forestry, Shandong Academy of Forestry, Northeast Forestry University, Beijing Forestry University, Inner Mongolia Agricultural University and other research institutes, and established "Luli New Materials Research Institute". Specializing in comprehensive utilization of wood processing resources, efficient value-added, functional wood-based panels and their products, home design research and development activities. The company has authorized 16 invention patents and 95 utility models; Won more than 10 provincial and municipal science and technology awards such as Shandong Province Science and Technology Progress Award, China Patent Excellence Award, Liangxi Forestry Science and Technology Award; In total, it has undertaken 20 national and provincial projects such as the 13th Five-Year National Key Research and Development Plan, the 14th Five-Year National Key Research and Development Plan, the central financial forestry promotion demonstration Project, the Shandong Provincial Technological Innovation Project, and the Shandong Provincial Forestry Innovation Project. Participated in the formulation of more than 40 international, national and industry standards.

JIANGXI LULI WOOD INDUSTRY CO.,LTD.

COMPANY PROFILE

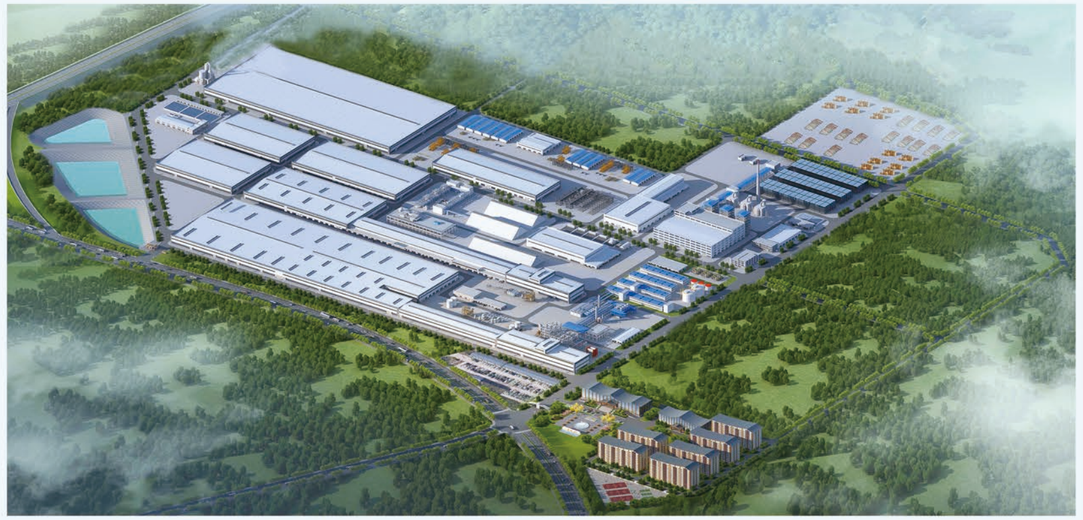

Jiangxi Luli Wood Industry Co., Ltd. was established in November 2021 with a registered capital of 500 million yuan. It is a holding subsidiary of Shouguang Luli Wood Industry Co., LTD. It is an enterprise that integrates fast-growing forest planting, processing and utilization, plate production and furniture manufacturing. As the manufacturing center of Luli Wood Industry in East China, Jiangxi Luli Wood Industry Institute is located in Anfu County, Ji 'an City, Jiangxi Province, with a total investment of about 10.3 billion yuan and a land area of about 1.87 million ㎡. The first phase of the construction of about 800,000 ㎡ of standard workshops and dormitories, office buildings and other related supporting facilities, mainly the production of logs, bamboo materials, PB/OSB (partical board / (laminated) OSB) and its deep processing products, the second phase of the construction of high-end panel projects, home projects, all completed after the sales revenue of more than 10 billion yuan, profits and taxes 2 billion yuan.

Relying on the company's rich experience in the wood industry over the years, the project proposes to build an industrial park in Fuxian County, Jiangxi Province, which is rich in bamboo resources, promote the development of the whole industrial chain, strengthen the leadership of science and technology, accelerate digital empowerment, realize the upgrading and expansion of the wood and bamboo industry, deeply integrate with the local wood and bamboo industry, promote regional economic development, and realize the effective connection between poverty alleviation and rural revitalization. Create a new development model of "Luli Garden Area", and play a good demonstration role in the country in scientific and technological innovation, industrial aggregation, intensive land use, industrial upgrading, low-carbon environmental protection, and circular economy.

JIANGXI ECOLOGICAL INDUSTRIAL PARK

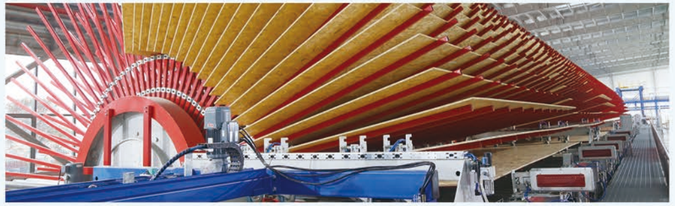

HUNAN LULI WOOD INDUSTRY CO.,LTD.

COMPANY PROFILE

Hunan Luli Wood Industry Co., Ltd. was established in November 2021 with a registered capital of 500 millons yuan. It is a holding subsidiary of Shouguang Luli Wood Industry Co., LTD. It belongs to "Top 500 Enterprises in China" - Luli Group Co., LTD. It is an enterprise that integrates fast-growing forest planting, processing and utilization, panel production and furniture manufacturing.

The company invested 6 billions yuan to build Hunan Luli Green new material Science and Technology Industrial Park project, which will be listed in the list of key projects in Hunan Province in 2022 and 2023. The project is divided into two phases, the first phase covers 745 hectares and the total construction area is 750,000 square meters. Located in the Industrial South Park, Longquan Street, Xintian County, Yongzhou City, Hunan Province, the project mainly includes an annual output of 1.6 million cubic meters of OSB, 60Mw biomass cogeneration, wood products trading center, warehousing logistics, rooftop photovoltaic power generation, wood processing and other projects, supporting office buildings, dormitories and R & D center. The first FOSB production line with an annual output of 800,000 cubic meters was put into production in January 2024, the next step, the company invested 4 billion yuan to create Hunan Luli modern home Industrial Park, the park covers an area of more than 300000 square meter, the introduction of 4 German Jintian Homai 4.0 smart home production line 4 Wemhoner laminated production line, with an annual output of 600,000 sets of furniture.

HUNAN ECOLOGICAL INDUSTRIAL PARK

鲁丽木业
LULI WOOD

全智能化 生产制造

WITHOUT METICULOUS ATTENTION AND
UNDERSTANDING
OF SAVORING THE DELICACY OF LIFE

Material preparation/drying/screening/blending glue /mat furmationg/hot pressing/plain board treatment
oriented strand board process

Full intelligent manufacturing system

Technological process
of decorative directional structural plate

Luli orient stand board using high-quality imported pine as raw materials, after long wood planing, drying, screening, mixing glue, multi-layer directional paving, pre-pressing, continuous flat pressing of orient stand board; The physical and chemical properties are produced in strict accordance with the European EN300 standard and the Chinese Forestry Minist GB/T41715-2022 standard.

1/ PREPARATION OF SOURCE MATERLAL

The long section is the first link of the production line; The quality of the planer plays a decisive role in the quality of the veneer oriented structural plate. The planer adopts the long wood planer equipment of Canadian Kaiden Company, which is the advanced planer equipment in the world.

① Wood feeder via chain. Transfer to roller barker.

② The operation mode of the barker adopts frequency conversion speed regulation, and the roller is adjusted according to the situation of wood peeling.Speed to ensure wood peeling effect.

③ The bark is sent to a thermal plant to be used as fuel. After the bark is peeled, the wood is transported by belt conveyor and chain.The feeder and the lateral wood puller enter the planer.

2/ DRYING PROCESS

1. The wet planer is transported to the wet shavings bin with a volume of 460 cubic meters, so that the shavings have a certain storage.Quantity to ensure uninterrupted subsequent production.
2. The wet shavings are dried by an air dryer with a length of 30 meters and a diameter of 6 meters.Hot flue gas drying, hot factory from the United States GTS company, Jieqi Mark introduced, using all.Automatic control with the drying system for chain control, can accurately control the heat of hot gas.The qualified rate of shavings is guaranteed.

3/ SCREENING

After the shavings are dried by the drying system, they enter the belt conveyer and are transported to the rotary sieve machine for screening. The shavings are screened into three types. The large shavings go to the surface dry bin as the surface shavings, the smaller shavings go to the core dry bin as the core shavings, and the small shavings go through the swinging sieve for secondary screening. After entering the grinding machine, it is stored in the fine material cylinder bin as the surface of the fine material, and the shavings are fully utilized.

4/ BLENDING GLUE

1. The table and core dry shavings stored in the dry bin are measured by the belt scale and then rolled into the table and core layer respectively.The drum type glue mixer mixes the glue, and the fine material shavings enter the glue mixing machine for uniform sizing.
2. The shavings after sizing are dried by scraper chain conveyer and screw conveyer into two surface layers respectively.Shavings metering silo and a core layer dry shavings metering silo, fine shavings through the belt conveyor.Enter two fine material metering bins.

5/ MAT FORMATION

Eight measuring silos automatically and evenly control the material loading of the planer, and the planer is paved with high precision through eight paving heads respectively. The upper and lower shavings are paved evenly on the surface of the fine material, and the middle two long and large planers are arranged longitudinally and the core layer is arranged horizontally. This cross-crossing structure makes the Lulik oriented particleboard with extremely high dimensional stability and static bending strength. The surface and edge of the board have a strong nail holding force, and bear the texture mechanism of the wood, and completely eliminate the influence of wood stress on processing, so it has good processing performance.

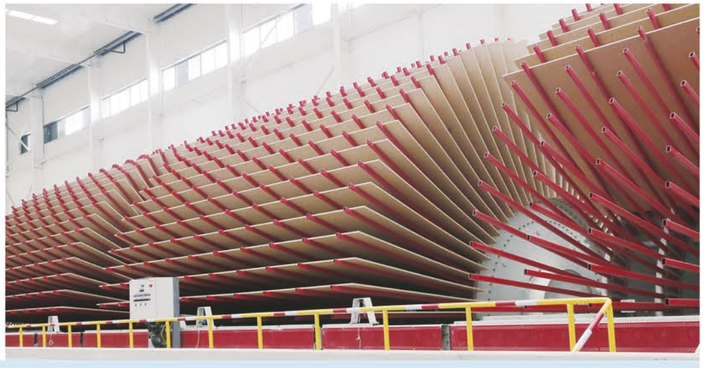

6/ HOT PRESSING

1. The slab after paving is edged longitudinally and enters the prepress for prepressing, and the slab after prepressing enters the hot press.
2. Before entering the hot press, the slab is weighed by a high-precision slab scale, and the density distribution of the slab is detected by a mobile density scanner, thus ensuring the stability of product quality.
3. The whole set of equipment is imported from Dieffenbach Machinery Manufacturing Co., Ltd. in Germany. The slab is hot pressed by continuous flat pressing method under the action of temperature and pressure.

7/ PLAIN BOARD TREATMENT

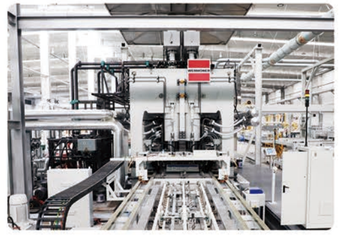

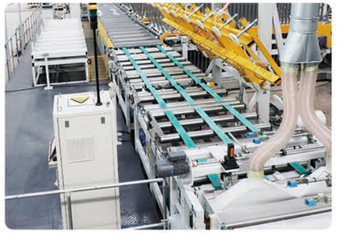

1. The plain plate after hot pressing is edged at the edge and then cut crosswise.
2. The sawn board is tested and monitored in real time by on-line bubbling detector, plain board weighing and thickness measuring instrument, and the qualified plain board warp after transverse sawing.After cooling, the turning machine enters the stacking station for stacking, and is transported to the cache warehouse by automatic car.
3. According to user requirements, the specifications of the board can be flexibly adjusted through the Antong specification saw, and the format size from 2 feet to 12 feet can be adjusted.
4. According to the different uses of customers, Luli directional structure board can also be sanding, sanding machine using Stanley Mon high-precision sanding machine, after sanding the thickness deviation of the board is positive or negative 0.05mm.

16# Melamine Fosb project

Melamine Fosb project investment of 450 million yuan, covers an area of 32835square meter , the design annual output of 452,000 m³ melamine faced osb and 48,000 m³ super matt UV board. The production process is jointly designed and developed by Luli Wood Industry and the world's leading German WEMHONER, the project integrates the concept of green manufacturing and intelligent manufacturing, the entire project is integrated by the information system control, to achieve fully automated transportation and big data information management, to achieve the overall production of intelligent, digital, visualization, equipment and technology level to reach the domestic leader, from the base paper printing, impregnation, pressure paste decoration Surface, Uv processing one-stop completion, at the same time can achieve higher precision decorative panel synchronization process, production efficiency is more than 5 times the traditional press, and lower cost, better quality.

1/ PRESSURE PASTING

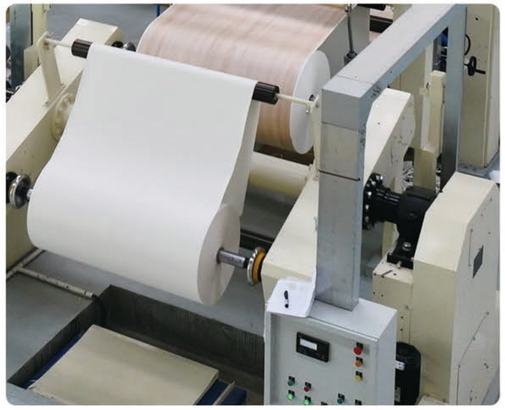

Germany Winconner automatic short-cycle pressing production line, can be in the maximum pressing range, to ensure the minimum thickness difference between materials, easy to use the substrate flexible, to ensure the quality of product processing, the production line is equipped with automatic board cleaning system, completely remove the substrate surface impurities, to ensure the quality of the veneer; Automatic absorbing and dipping adhesive paper, reduce manual and paper damage, automatically complete paving work, no human intervention is required; The automatic turning plate cooling device solves the problem of long traditional natural health cycle, and can quickly reduce the temperature of the plate to below 40℃.
Winconner synchronous flower process is a technology that synchronizes the texture of wood grain paper and steel plate template through high-definition camera system and precise positioning technology during the pressing processing, which is generally said to be the stamping steel plate and steel plate.

2/ IMPREGNATION

IMACO dipping line is the most high-end dipping production line in domestic dipping line, which belongs to the high-speed dipping line, the line speed can reach 30-35m/min, the line speed of ordinary domestic equipment is 20m/min, and the accuracy is much higher than the peer level under the condition of high line l speed, ensuring accurate gluing amount and uniform surface gluing; It has precise impregnation and coating, multi-point tension control, long color calibration, positioning shear, high efficiency and energy saving and stable drying performance. And the automatic dispensing device is used to ensure the scientific and accurate ratio of various injection agents.

3/ PRINT

Printing line using German road support technology, domestic printing line speed of 120-150m/min, and ZEETECH printing line can reach 250-300m/min, belongs to high-speed printing machine, to achieve high-speed printing at the same time, to ensure accurate overprinting, stability and quality is domestic printing line can not be matched.
The project mainly includes 4 German "Winconer" automatic short-cycle pressing production lines, 4 "IMACO" flat pressure jet dipping production lines, 4 decorative paper gravure printing lines, 19 sets of intelligent storage systems and other production and supporting facilities. Currently, Winconer production line 1 and 2 have been officially put into production, and Line 3 is under commissioning. It will be put into production in November. The installation and commissioning of Line 4 will be completed in December. IMACO impregnated rubber line: Line 1,2 is in normal production, line 3 is finished commissioning and trial production begins. Printing line: Line 1 five-color printing machine is in normal production, line 2 four-color printing machine will be installed in the factory in the middle of this month.
After the completion of the construction of the project, it can achieve sales revenue of 1.57 billion yuan and profit and tax of 220 million yuan, further leading the green and healthy development of the wood-based panel and home industry.

OSB

[OSB] INTRODUCTION

ORIENT STAND BOARD (also known as oriented particle board, European pine board, English name ORIENT STAND BOARD for short OSB) is a new type of wood board products made of 100% logs by peeling, planing and hot pressing. The raw materials for production are pine small wood, branches and wood processing scraps, which saves a lot of wood resources. The directional structure board reorganizes the wood texture structure, and its mechanical properties are better than ordinary particle board in directivity, durability, moisture resistance and dimensional stability. It has the characteristics of small expansion coefficient, no deformation, good stability, uniform material and high nail holding force, which is incomparable to traditional particleboard and joinery ecological board.

[OSB] APPLICATION

OSB2
It is mainly used for the inner wall, heat insulation board, ceiling, ordinary furniture and interior decoration substrate, wooden door and sofa keel board under the condition of dry state.

OSB3
It is mainly used for load-bearing furniture manufacturing, mechanical and electrical product packaging, and wood structure housing construction in areas with little rain.

OSB4
External walls, roof panels, and floor panels of wooden buildings; Board for waterproof furniture.

OSB

FACING [OSB] INTRODUCTION

Luli can decorative ORIENT STAND BOARD is on the basis of ordinary ORIENT STAND BOARD, in the upper and lower two surface of the fine material pavement made of the board, make up for the directional standard board because of large shavings exposed and not directly decorative defects, in the domestic and international are the first. Luli can be decorated directional standard plate using the world's advanced diamond roller laying machine to evenly spread the fine material on the upper and lower two surfaces, so that the surface is smooth and smooth, and the characteristics of strong finish; The core layer is made of multi-layer directional paving of large planer, so it has the characteristics of directional standard plate; Fully meet a variety of finish processing.

FACING [OSB] APPLICATION

It can bear the plate under the dry condition of the directional standard board, and can be directly used for ordinary furniture and interior decoration board after pressing and pasting melamine veneer paper.

Pursue the cutting-edge concept of world fashion;
Selected natural high-quality wood, environmental technology to create excellent quality;
Constant sealing anti-moisture technology, in order to the floor permanent, stable;
Fine production process, comprehensive care of the surface, lasting bright.

鲁丽木业
LULI WOOD

Pioneer in plate industry
Cieator of green life

Ingenuity has not changed, and innovation continues.

luli industry developed a direct veneer of zero formaldehyde added directional structural board,
Lead to the domestic wood-based panel industry structure upgrade and product revolution;
Attach importance to the concept of green development, create a safe, healthy and environmentally friendly living environment for consumers, and strive to improve the health quality of modern home life.

FIVE MAJOR ADVANTAGES

进口原木

We built our own forest plant in New Zealand and established long-term cooperative relations with many other countries to ensure the quality of wood while establishing stable development relations with supply channels.

防水防潮

The exclusive use of isocyanate (MDI) glue insoluble in water technology, completely block the invasion of water molecules, with good waterproof and moisture proof performance, so that you enjoy a wordless life.

零醛添加

The use of imported isocyanate (MDI) aldehyde-free adhesive in the production process, truly achieve natural green pollution-free, harmful to health, to meet consumers' pursuit of environmental quality. (Take care of your family and enjoy green life)

德国装备

The OSB production line is developed with Dieffenbach in Germany, and the production line is formed once to ensure the efficient output from the log to the finished product, which realizes the great transformation from the traditional labor-intensive production process to automation, digitalization and cleanliness.

高握钉力

The structural characteristics of directional particleboard enhance the nail holding force on the front and side, solve the defects of poor nail holding force of joinery board and ordinary particleboard, and ensure the dimensional accuracy and long-term use of the finished product.
