EXTREME COST-EFFECTIVENESS

Company Profile

Shandong Luli Home Furnishing Co., Ltd. was established in 2019. Affiliated to Luli Group, one of the powerful Top 500 Chinese Enterprises, it is a leading enterprise in the whole-house customization industry. Its core business covers the design, production and sales of products such as wardrobes, kitchen cabinets, wooden doors, wall panels, floors and furniture. The company invested 520 million yuan to fully introduce the German HOMAG Industry 4.0 full-process intelligent home production line, creating an advanced domestic intelligent manufacturing base for whole-house customization. It can complete the production of a set of furniture in an average of 28 minutes, solving the precise furniture customization for 410 families every day, and truly realizing the flexible production mode of "precise customization + mass production".

In terms of production technology, the German HOMAG Industry 4.0 intelligent production line can realize intelligent stereo warehouse board distribution, intelligent sawing, flexible edge banding, high-speed drilling and robot sorting. The whole processing process is fully automated and intelligent, with high processing precision, fast circulation speed and no landing throughout the process, which greatly improves production efficiency and product quality.

In terms of health and environmental protection, Luli Home Furnishing fully considers consumers' pursuit of environmental protection, durability and personalization, uses the OSB board produced by Luli Wood Industry, and innovates zero-formaldehyde added products. The environmental protection grade reaches the highest domestic standard ENF recognized in the industry, and has the advantages of environmental protection, good stability, strong nail holding force and not easy to deform. It ensures that each set of products has reliable quality and leads the green and healthy development of the home furnishing industry.

In terms of industrial upgrading, Luli Home Furnishing actively responds to the national call for developing new quality productivity, with a total investment of 2 billion yuan, and signed 4 standardized furniture production lines with German HOMAG Company, which will be put into operation successively in 2025. Each production line has an annual output of 15 million square meters of standardized furniture, which not only meets the personalized and high-quality ideal needs of consumers in the new era, but also solves the problems of long delivery cycle, high price and insufficient flexibility in traditional whole-house customization. It provides consumers with more diversified and cost-effective high-quality products.

With a forward-looking vision, Luli Home Furnishing has included the construction of an intelligent green factory in the primary planning of enterprise development, accumulated the "potential" for future development with the "new" of industry, accelerated the cultivation of new quality productivity, and brought high-quality, healthy and environmental protection home products and one-stop whole-house customization services to thousands of households.
